

# Jeff Kowalski's Quest For The Perfect Green

I have been a health nut for over 28 years... and I put only the best products in my body. About 12 months ago I approached HTE with the idea of carrying an all-natural green product. After testing a number of greens, I found the best tasting, highest quality, low-heat-process greens available.

The organic barley and alfalfa grasses of Go Green are grown at 5,000 feet above sea level where there is a 40-degree temperature swing every day, which causes the grasses to grow more vigorously and produce more antioxidants.

Unlike most U.S. soils which have been depleted of selenium, high altitudes also produce high selenium counts. This results in higher selenium content in Go Green that enables other nutrients to be better assimilated in our bodies.

Go Green is made from primarily organic and wild-harvested ingredients.

We include organic grasses, ten organic vegetables (carrot root, kale leaf, fennel root, spinach leaf, collard greens, parsley leaf, Swiss chard leaf, beet root, broccoli tops, and cabbage leaf), enzymes, pro-biotics, sea trace minerals, mushrooms and sprouts... a total of 77 ingredients of the highest quality. There are no artificial colors, preservatives, chemicals, dairy, gluten, or MSG.

A medical doctor, who uses homeopathy and is an acupuncturist and herbalist, designed our Go Green formula to nourish every organ of the body. Our grasses and 10 organic vegetables, are juiced and dried at super low temperatures, resulting in retention of live vitamins, minerals, and enzymes. After being juiced, our formula is sent up a 200-foot stainless steel tube. As the juice drops back down, it dries, never getting above 100 degrees. This is the most expensive drying process in the industry, but it meets our highest standards.

I had the privilege of visiting the manufacturer, a certified organic Handler and Processor (USDA) and Kosher Certified laboratory located in the U.S. They have been in production for over 20 years. The owner answered all my questions and I walked away even more impressed with the product.

Taken once a day, one can is a month's supply. One or two scoops can be used as a meal replacement. I have almost eliminated most of my other natural vitamins, minerals and drinks in place of our new Go Green and I feel even better than before. I am also saving a lot of money.

**Drink Go Green and you'll have an unfair advantage!**
