*pH*  
*and your*  
*body*

The pH scale is used to measure how acidic or alkaline the blood is. Just changing the pH by 1 or 2 points effects the body's electrical chemistry drastically.

*The GOAL is to keep your pH in a range of 6.8–7.2*

*When the  
balance is disrupted,  
illness and even  
death can  
result.*

# *An Imbalanced pH Can Lead to...*

## **EARLY ACIDOSIS**

- Acne
- Low sex drive
- Food allergies
- Bloating
- Difficulty waking up in the morning

## **MODERATE ACIDOSIS**

- Asthma
- Urinary infections
- Excessive hair loss
- Depression
- Migraines

## **SEVERE ACIDOSIS**

- Cancer
- Lupus
- Multiple Sclerosis
- Rheumatoid Arthritis
- Tuberculosis

Alkalize or Die — Dr. T. A. Baroody (2002)

*What can cause an  
unhealthy pH?*

*Dehydration  
Stress  
Chemicals  
White Flour, Sugar, Alcohol,  
Meats, Any Refined,  
Processed, Enriched, or  
Preserved Foods*

## *Drinks that can cause an unhealthy pH...*

Soda Pop is a 1.0!

***FACT:** It takes 32 - 8 oz glasses of water to counter balance 1 can of soda pop!*

*Coffee is a 1.0-2.0!*

Most beer is somewhere between 1.0-2.0 depending on the brand. Folks that consume huge amounts of soda pop and/or beer are usually acidic and are magnets for most illnesses including cancer.

**FACT:**

A healthy immune system is the #1 key system to preventing sickness, viruses, bacteria, parasites, fungus & chemicals from damaging the body.
